OBSERVATIONS

The collection is made with marble. As it is a natural product, variations in tone, colour, granularity and pattern may occur. Because of this, the sample may not exactly match a slab or finished product.

One of the key characteristics of natural travertine is the holes and pits gracing the surface and inside of the stone. These random holes present in natural travertine are considered normal characteristics of this stone and therefore not defects.

Product sizes may vary up to 2 cm.
