

Reduce production costs through Traceability and process optimisation.

The main characteristic of MULTI IM (Metalworking Industry) is its enormous capacity for dealing with different realities and evolving according to the needs of each organisation. The many Production Planning and Launch philosophies in MULTI IM make it possible to adopt different Production Management models.

TRACEABILITY

Metalworking MULTI-INDUSTRY

MULTI IM (Metalworking Industry) is ERP with MES and SFC, production management and influencing it with diverse factors in order to maximise available resources at the least cost, while minimising the need for human intervention.

The information obtained from production records makes it possible to act directly on the machine loading process and to obtain a wide range of statistical data, particularly the production and productivity of the resources concerned.

This online production monitoring, based on philosophies that allow documentary and physical product traceability, makes it possible to control discrepancies between the "expected" and the "real", both in terms of consumption and time and in terms of cost.

ADVANTAGES

- ✓ SIMPLIFICATION OF PROCESSES
- ✓ MONITORING PRODUCTION STATUS
- ✓ TRACEABILITY
- ✓ CALCULATING PRODUCTION COSTS
- ✓ REDUCTION OF TIME SPENT ON THE LOGISTICS PROCESS
- ✓ OPTIMISING THE PROCUREMENT PROCESS AND DELIVERY PLANNING
- ✓ PROCESS AUTOMATION
- ✓ ADAPTABLE TO DIFFERENT PRODUCTION LAUNCH PHILOSOPHIES
