

Commitment to Sustainable Design

At Dooq sustainability is at the heart of everything we do. We are dedicated to creating furniture that not only enhances spaces but also respects the environment. Our commitment to sustainability is reflected in our careful selection of materials, innovative design processes, and strong partnerships with local craftsmen.

Designing for Longevity

We prioritize designing long-lasting products, focusing on durability and timeless appeal. Our approach involves smart solutions that reduce the quantity of materials used. We carefully minimize the use of joining elements, screws, and bonding, ensuring each piece is not only aesthetically pleasing but also environmentally friendly.

Sustainable Materials

Our primary material is wood, a natural, renewable, and sustainable resource. We exclusively use solid wood and plywood that are FSC and PEFC certified, ensuring that our materials come from responsibly managed forests. This commitment guarantees that our products are both high-quality and environmentally conscious.

Fair and Local Partnerships

We believe in building strong, long-term relationships with our production partners. Working with the best Portuguese craftsmen, we ensure that our collaborations are based on trust and fair trade principles. Our partnerships focus on local integration, which balances price, quality, and innovation, supporting the local economy and reducing our carbon footprint.

Eco-friendly Packaging

We take great care in our packaging process, striving to be as plastic-free as possible. Our products are packaged compactly to minimize space during transport, reducing the environmental impact associated with shipping.

Innovation and Quality

By continually innovating and maintaining the highest standards of quality, we ensure that our products not only meet but exceed our customers' expectations. We are always striving to improve, making continuous efforts every year to enhance our sustainable practices. Our focus on responsible sourcing and eco-friendly design reflects our commitment to the environment and the well-being of future generations.
